Determine the orientation and position with deep learning

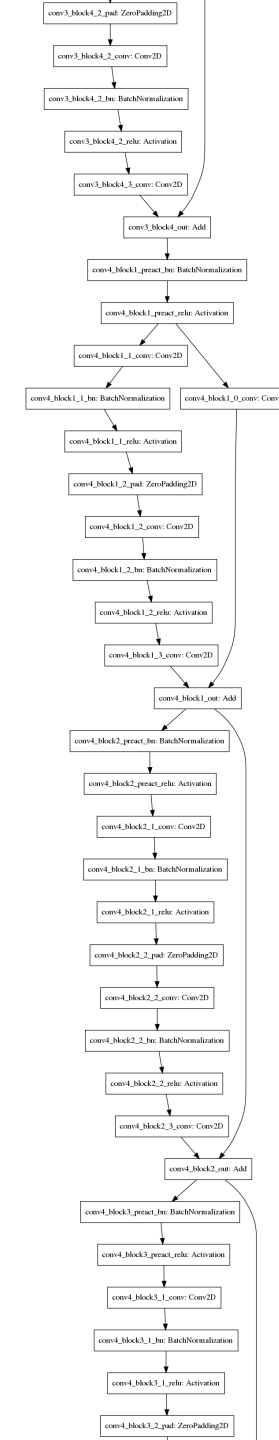

Resnet + Fine tuning

Resnet50

A 50-layers convolutional neural network

Open in Colab

Training

**training a ResNet-50 on a
single GPU took ~14 days
(10^{18} single precision ops)**

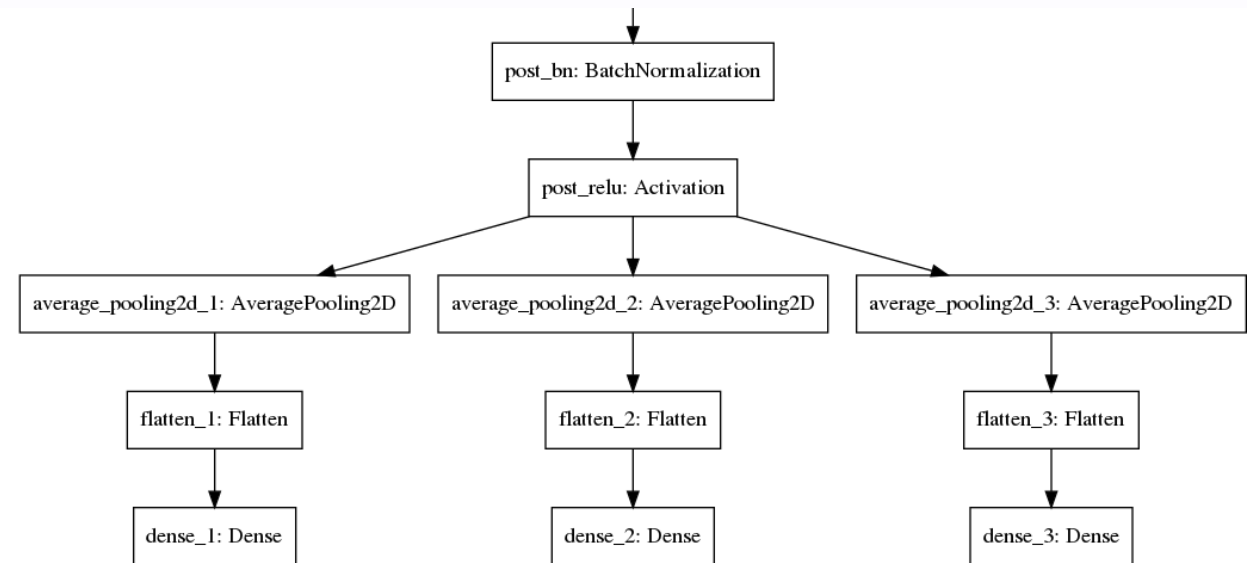

Open in Colab

Fine tuning

**Setp 0, get the resnet50
which traned on imagenet
without the head layers, then
add our own head to it.**

**Step 1, Freeze the body
layers, trains the head layers
for 10 epochs**

**Step 2, Train all the layers for
100 epochs**

Nvidia P100 GPU

~ 20 minutes per epoch

**100 epoch = 2000 m = 33
hours ~ one and half
day**

Euler angles

$$\varphi: 0^\circ \rightarrow 360^\circ$$

$$\theta: -10^\circ \rightarrow 10^\circ$$

$$\psi: -10^\circ \rightarrow 10^\circ$$

Mean Absolute Error

φ : 0.14642

θ : 0.01692

ψ : 0.01699
